

FOR IMMEDIATE RELEASE

CONNOR, CLARK & LUNN INFRASTRUCTURE AND CARBONFREE TECHNOLOGY CLOSE DEBT FINANCING FOR SOLAR PORTFOLIO

Toronto, Canada, May 5, 2015

Connor, Clark & Lunn Infrastructure, CarbonFree Technology and the Métis Nation of Ontario (MNO) are pleased to announce the closing of long-term debt financing for their jointly owned portfolio of commercial-scale solar projects. The portfolio, comprised of 58 rooftop and 5 ground-mount projects located across Ontario, ranks among the largest of its type in Canada. The projects in the portfolio have a generating capacity of more than 18 megawatts and represent approximately \$85 million of capital.

A number of the projects in the portfolio are owned by BrightRoof Solar, a limited partnership formed by Connor, Clark & Lunn Infrastructure and CarbonFree in 2010 to finance, develop, build and operate commercial-scale solar systems. The remaining projects are owned by Métis Nation of Ontario – BrightRoof Solar LP, a second partnership created by Connor, Clark & Lunn Infrastructure, CarbonFree and the MNO.

“The closing of this debt financing is the culmination of a multi-year commitment by us and our partners to the development of this diverse portfolio. We would like to express our gratitude to our partners at CarbonFree and the MNO for their leading role in the development and construction of this attractive base of assets,” said Matt O’Brien, President of Connor, Clark & Lunn Infrastructure. “This investment is an excellent addition to our growing portfolio of high-quality, long-duration infrastructure assets and reinforces our position as one of the largest owners of solar assets in Canada.”

The proceeds of the financing will be used primarily to fund construction costs for projects in the portfolio. The projects range in size from 93 to 600 kilowatts, with the majority located in the corridor between Toronto and London Ontario. The electricity generated from the projects will be sold to Ontario’s Independent Electricity System Operator under 20-year Feed-In Tariff (FIT) contracts.

“The fact that blue chip lenders are now comfortable with the forecast performance of commercial-scale solar projects is an important step in the development of the solar power industry in Canada,” said David Oxtoby, CEO of CarbonFree Technology. “It validates our strategy in developing these high-quality solar assets.”

“This financing is another step on the path leading toward the MNO’s long-term goal of being able to generate enough green energy to meet the needs of every Métis household in the province,” said MNO President Gary Lipinski. “We are pleased to have achieved the next milestone in the development of this portfolio of assets as we create training opportunities, jobs and wealth for Métis communities in the province.”

About Connor, Clark & Lunn Infrastructure

Connor, Clark & Lunn Infrastructure invests in middle-market infrastructure and infrastructure-like assets with highly attractive risk-return characteristics, long lives and the potential to generate stable cash flow. Connor, Clark & Lunn Infrastructure is part of Connor, Clark & Lunn Financial Group Ltd., a multi-boutique asset management firm whose affiliates collectively manage approximately \$60 billion in assets.
